What drone did you use? It is interesting to know, because the shutter time of the camera seems to not be able to keep up with the speed of the object.

**LoneDrone911** 4 months ago

homeruniverse it\u2019s a DJI phantom 4 pro. I\u2019ve studied the picture on an iMac screen and slowed it down as much as I can. At first I thought it might be a flying bug or bird. But it\u2019s too fast and appears to come from the wooded area some distance away.

**homeruniverse** 4 months ago

Thanks. I think you are absolute right with that assessment. Most of these objects appear to travel on a constant altitude and speed over the ground. If we assume that we can make the following estimations about your footage:

First appearance at 52\u00b045'44.8N 1\u00b0058'16.1W (frame 108)

Last appearance at 52\u00b045'28.7N 1\u00b0058'03.4W (frame 144)

That makes a speed of around 1288km/h (800mph), roughly the speed of sound. No animal can achieve that and a model airplane would need a very loud jet propulsion for that.

Your video is one of the better ones, since we can see the object approaching from far away. Good job, sir :-)

**homeruniverse** 4 months ago

Thanks for uploading. Where is this? (Britain?) And when exactly ?

**LoneDrone911** 4 months ago

homeruniverse this was taken in the U.K. in an area called Cannock Chase.

Thanks, I found the exact spot of the drone on Google maps :) at 52\u00b045'26.2N 1\u00b0058'02.2W

Assume you know and can't reconstruct when you shot it? - It would be interesting for me to check the exact weather data of that day and time (some believe these are weather related phenomena, but I don't and want to collect a wide variety of cases under very different weather conditions).

homeruniverse | \u201919 | check tomorrow the exact time and date the footage was shot.

**homeruniverse** 4 months ago

That would be very helpful, thanks :-)

**homeruniverse** 3 months ago

Did you find out the exact date and time?

**homeruniverse** 3 months ago

Do you know the exact time now?
